WIRELESS SOLUTIONS

Example Supplied Cable

Supplied with the unit is a single pre-terminated cable for each active line.

Step 1:
Locate the 66 Block or D-Mark.
Step 2:
Determine each run associated with the cable pulls on the 66 block or D-Mark.
Step 3:
Disconnect current PSTN supply lines and align the marked ports with the designated inbuilding runs.
Step 4:
Strip the ends from the pre-terminated cable and pinout each line with a cable.
Step 5:
Insert the RJ11 coupler to the back of the DataRemote device with its associated jack for each run.
Step 6:
Complete all runs, power up unit, and test each line.

Note: Each Jack is an independent circuit and must be marked active on the sheet for the line to function.

Importance: Alarm Lines MUST BE properly paired with the designated/assigned Alarm Jack on the DataRemote appliance to function properly.
